Shibaura Institute of Technology Junior and Senior High School

The Pinnacle of

***Science and
Engineering***

Science and Technology Education

Transcending the boundaries of liberal arts and science, our program immerses students in the fundamentals of science and engineering, sparking their interest in diverse scientific fields. With a special bi-weekly two-hour class for third-year middle school students, we step beyond textbook learning. Our curriculum, featuring eleven different themes throughout the year, is designed to maximize student engagement and curiosity in various scientific specializations.

Global Education

As an affiliate of a university selected for the government's Super Global Universities Project, we emphasize international exposure through our overseas program. Shibaura Institute of Technology, the only private science and technology university selected for the project in 2014, is rapidly advancing its global presence. This commitment to internationalization is a core aspect of our educational philosophy.

4 Types of Education at Shibaura Institute of Technology Junior and Senior High School

University Collaboration Education

From the onset of their educational journey, students are exposed to advanced learning through special classes at Shibaura Institute of Technology. Implementing these classes from the first year allows students to experience the excitement of discovery in cutting-edge fields. Our school is esteemed in Japan for its STEAM education, made possible through full collaboration with Shibaura Institute of Technology, bringing a wide range of hands-on engineering and technology experiences to our students.

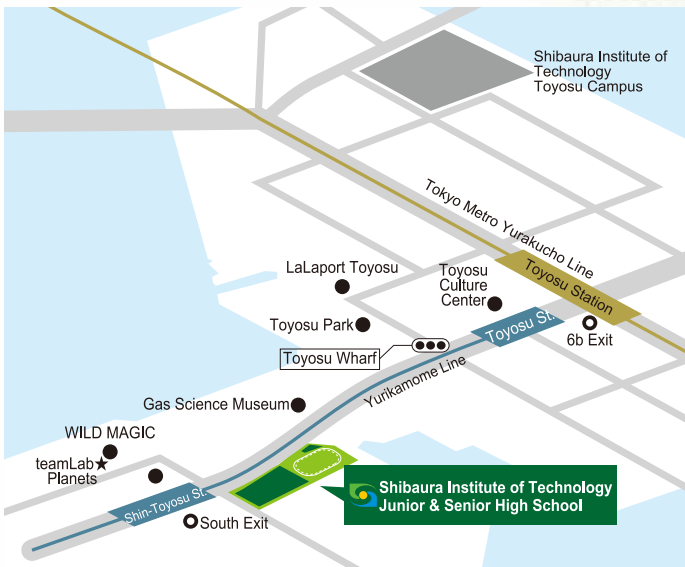

Career Education

In our view, university admission is not the end goal; rather, it is the gateway to understanding what careers lie ahead. Our career education aims to help students discern their future paths, recognizing the wide array of careers stemming from specialized scientific learning. Our focus is on providing diverse learning opportunities, enabling students to design a fulfilling life tailored to their individual aspirations in various scientific fields.
